English name	Sigurjón Ólafsson Museum
Street Address	Laugarnestangi 70
Zip code and city	IS 105 Reykjavik
Country	Iceland
e-mail / web	LSO@LSO.is www.LSO.is
Director	Birgitta Spur

Exhibitions take place in two halls, the main hall which is the former studio of the artist, and a smaller one on second floor. Part of the entrance is also suitable for exhibitions. The first buildings of the museum reach back to the 1940s, but they were entirely renovated in 1986–88. The exhibition space is: Main hall: 12.5m × 7m, height: 4m, wall space limited due to visible building-structure in the walls. Second floor hall: 6m × 7m, height 2.4m. Entrance: available ca 25m², height 2.4m. Concerts and other cultural events are frequently held in the main hall.

The museum is lit by mixture of daylight and candescent/LED light.

The temperature and humidity are controlled by monitors and kept at controllable levels, 20–21°C and 35% – 40% respectively.

A central security system in the museum receives messages from, fire, flooding and burglar sensors and automatically alerts *Securitas* – security service in Reykjavík. The security system is checked by professional service once a year.

The fire system consists of optic and ionic smoke detectors and temperature detectors where appropriate. Hand held fire extinguishers and water hose are present.

The flooding system consists of conductivity detectors at the floor close to water pipes where appropriate.

The burglar system is activated at off hours or when appropriate. A museum guard is present during opening hours.

Packing up and down takes place in the exhibition area. Crates can be run in and out on fork lift. There is no storage for empty crates directly at the museum.
